PROFILE SUMMARY

Passionate full-stack web developer with expertise in the MERN stack, seeking to contribute to innovative projects. Through independent learning and building production-style personal projects, I have honed adaptability and problem-solving skills that I bring to tackling complex technical challenges.

SKILLS

Languages & Frameworks: JavaScript, TypeScript, Java, C, C++, Express.js

Front-End Development: React.js, Redux, Zustand, Tailwind CSS, Bootstrap, HTML, CSS

Back-End Development: Node.js, Express.js, MongoDB, MySQL, Redis

Tools & Platforms: Git, GitHub, Postman, AWS, Google Cloud, Firebase, Visual Studio Code

Familiar With: Data Structures & Algorithms, NetBeans, Android Studio

PROJECTS

ManMode

[GitHub](#)

- Developed ManMode, a full-stack e-commerce clothing platform using EJS, Node.js, Express.js, MongoDB, and Tailwind CSS.
- Implemented user authentication with OTP validation (via Nodemailer), Google OAuth login, email/password login, and password recovery.
- Integrated Razorpay for secure online payments with success/failure handling and a retry-payment flow, alongside a wallet system for balance top-ups and wallet-based checkout.
- Developed a user dashboard for managing profile, addresses, wishlist, orders, reviews, returns, and cancellations, with product features including sorting, size selection, image zoom, and related product suggestions.
- Designed an admin panel for user management, product control, coupon and offer management, banner management, order approvals, and sales reporting with Excel/PDF export.

Musiffy

[GitHub](#)

- Developed a Spotify-inspired, full-stack music streaming application using React, TypeScript, and Vite for the front-end and Express.js with Node.js for the back-end, featuring real-time presence tracking, live chat, and a fully responsive UI.
- Built the frontend using React, TypeScript, Zustand for state management, and Shadcn/UI (Radix primitives and Tailwind) for accessible, reusable components.
- Implemented role-based access with separate Admin and User panels, protected via Clerk-based middleware; admins can manage songs/albums, users, and view platform analytics, while users stream music, maintain a wishlist, and chat one-to-one.
- Integrated real-time features using Socket.IO, including live user presence, activity status broadcasting, and instant message delivery with persisted chat history.
- Created secure RESTful APIs with Node.js and Express.js, used MongoDB with Mongoose for data modeling, and managed media uploads via Cloudinary with seed scripts and scheduled cleanup via node-cron.

K-Mart

[GitHub](#)

- Developed a full-stack MERN grocery e-commerce application using MongoDB, Express.js, React.js, and Node.js, with Tailwind CSS, Stripe, Redis (Upstash/ioredis), Cloudinary, JWT, and Google OAuth, featuring role-based access for Admin and Users.
- Implemented secure authentication using JWT with access/refresh token rotation, Google OAuth, OTP-based signup verification and password reset via Nodemailer, and bcryptjs for password hashing, with Redis (Upstash) used for OTP storage and caching.

- Developed an Admin dashboard for product, category, and coupon management with Cloudinary image uploads and sales analytics (daily sales data, revenue trends) visualized with Recharts.
- Built a real-time-feeling notification system for both users and admins, with read/unread tracking and deletion.
- Created responsive product listing, cart, and checkout flow integrated with Stripe payments and animated UI feedback (Framer Motion, confetti, count-up stats) on order success.
- Designed RESTful APIs using Express.js and MongoDB (Mongoose) across products, categories, coupons, notifications, and analytics, with mobile-first, responsive UI using Tailwind CSS.

BlogSpace

[GitHub](#)

- Developed a dynamic blog application using React for the front-end and Express with Node.js for the back-end, with MongoDB as the database and Mongoose models for users, posts, and structured error handling.
- Implemented user authentication using JSON Web Tokens (JWT) with Bearer-token authorization and bcryptjs for password hashing.
- Enabled authors to add, edit, and delete blogs with category-based organization and a rich text editor (React Quill); allowed users to browse by category and author via a dedicated authors listing page.
- Added profile management features including avatar upload (via Express File Upload) and partial profile editing, with toast notifications (React Toastify) for user feedback.

Chate

[GitHub](#)

- Developed a full-stack real-time chat application using React, Tailwind CSS, DaisyUI, Zustand, Node.js, Express.js, MongoDB, Socket.IO, Cloudinary, JWT, Nodemailer, and Google OAuth, featuring one-to-one messaging, image sharing, and live online/offline presence indicators.
- Implemented authentication using email/password with OTP verification (via Nodemailer) for signup, login, and password reset, alongside Google OAuth; secured sessions with JWT and used Cloudinary for profile picture uploads.
- Built customization features including theme switching (DaisyUI themes) and font selection with adjustable font family and size, persisted via local storage.

EXPERIENCE

MERN Stack Developer Intern — Synnefo Solutions, Kochi

2024

Completed an internship as a MERN (MongoDB, React.js, Express.js, Node.js) stack developer, gaining hands-on experience and proficiency in key technologies through contributing to real development projects.

MERN Stack Developer Intern — Brototype

In Progress

Currently pursuing an intensive MERN stack development internship program.

Graphic Designer — Freelance

- Produced engaging social media posters and banners for diverse clients, ensuring alignment with their branding and promotional goals.
- Designed and developed a dynamic website for a client.

EDUCATION

MERN Stack Development

Synnefo Solutions, Kochi

Diploma in Computer Engineering

AKNM Polytechnic, Thirurangadi, Malappuram

Plus Two (Science)

MES Mampad, Malappuram
